

WAYNE FUSION™ FORECOURT SYSTEM

Control where you need it most

The Wayne Fusion Automaton Server allows your dispensers, tank gauging system, price signs, and back-end reporting to more seamlessly interface with your point-of-sale (POS) and ERP systems. Packed with advanced software technology, it's one small, but powerfully upgraded, solution.

Control over costs

The Fusion Automation Server gives you the control you need to help reduce deployment and implementation costs. By giving you better visibility over many of your current devices with one single tool, maintenance costs are reduced, and there are fewer potential points of failure. You simply plug in the Fusion forecourt controller, hook up your devices, and within minutes, you're connected and in control.

Control over data

With the Fusion Automation Server's in-depth web-reporting capabilities, you can get better visibility into sales, operations, inventory, and equipment. Which means you're better equipped to make smart business decisions. And with remote accessibility built in, it doesn't matter where you are or what time it is, you can find the information you need.

Control over complexity

By interfacing with multiple forecourt devices, as well as POS systems from multiple vendors, a Fusion Automation Server gives you one single point of control. This flexibility enables all of your key systems to speak the same language and provides you a single interface to:

- Fuel dispensers from multiple vendors
- Tank management systems
- Price signs
- POS systems
- ERP and fleet management systems

Control over clutter

The Fusion Automation Server provides all of this control in a single, streamlined solution configured specifically for the rugged demands of a petroleum-retail environment. With its solid-state construction, the Fusion Automation Server is built to withstand extreme temperatures and dust. And with all of the advanced technology packed into it, it's also built to handle your complete forecourt needs.

Control over your future

The Fusion Automation Server is designed to easily expand with your growing business needs. The system is flexible and upgradeable, so as your business needs continue to evolve, you can readily add software and hardware to keep up.

THE ONLY SOLUTION YOU NEED

A single Fusion Automation Server can replace your:

- Forecourt controller
- Automatic tank gauge (ATG) system
- Petroleum-retail console
- Interface and distribution boxes
- Third-party proprietary controllers

CONTROL, CENTRALIZED

The enterprise-enabled remote diagnostic software can be included in your Fusion Automation Server warranty. What does that mean to you? It means you can get:

- 24/7 remote support for dispensers, systems, and other technology
- Device monitoring and remote problem resolution
- Escalation notification
- Increased security for forecourt and network
- Data management

One system. Two models of control.

The Fusion Automation Server is available in three models, each configured to address the needs of various site environments.

Fusion 1000 If you have an existing POS system, the Fusion 1000 Automation Server is an easy way to connect with the forecourt today, with expansion capability for future upgrades. This off-the-shelf box easily connects your POS, ERP, and your dispensers, regardless of the manufacturer.

- Easily connects your POS and ERP to your forecourt devices
- Consolidates boxes — minimizes potential points of failure
- Easy to upgrade to the Fusion 3000 forecourt system — add capability without adding boxes

Automatic Tank Gauge

Dispenser Interface

POS Interface

Fusion 3000 With on-site and remote connectivity, and comprehensive web-reporting features, the Fusion 3000 Automation Server gives you better control and visibility over your fueling station. If you need automation without electronic payment or require POS redundancy, the Fusion 3000 forecourt controller is the best choice for you.

- Console application with easy-to-use interface allows enhanced control of the dispenser, including pre-payment and post-payment transactions
- Enables cash transactions and payment reconciliation
- In-depth web reporting gives you site data at your fingertips — in real time
- Web-enabled user interface lets you connect from remote locations and run any report
- Provides back-up console application for site redundancy in case of POS failure

Reporting Package

Your forecourt, integrated

The Wayne Fusion Automatic Tank Gauge (ATG) is a complete, integrated ATG-and-forecourt solution that's also completely flexible. It offers a variety of hardware and software options that can be included from the start, or retrofitted remotely to meet changing needs. It's also designed to integrate seamlessly with the Wayne Fusion forecourt system for full visibility into all aspects of operations.

FEATURES

- Connects to magnetostrictive digital probes from 18" to 840"
- Compact barrier for easy installation
- Extensive range of environmental sensors
- Pressure Line Leak Detection (PLLD) for submersible systems
- Touch Monitor and printer as option
- ATEX, INMETRO and EPA certified

BENEFITS

- Integrated ATG and Forecourt Control solution for increased flexibility
- Reduced number of components results in a lower initial systems investment
- Scalable over time
- Native connectivity from anywhere, at any time, unlike other ATG controllers
- Digital wired and wireless probes provide accurate and reliable measurements
- Complete range of environmental sensors and peripherals

CAPABILITIES

- Continuous in-tank leak detection
- Automatic inventory reconciliation
- Auto-calibration
- Comprehensive set of alarms and reports
- Automatic delivery detection
- Remote monitoring and management
- Automatic temperature compensation

REPORTS

- Tank Product Summary
- Tank Daily Report
- Manual Dip Readings
- Delivery Reconciliation
- Daily Reconciliation
- Tank Variances

COMPLIANCE

- Auto-calibration status
- Leak detection
- Dip readings differences and reconciliation
- Stock forecast
- Sales by product/period
- Tank alarm history

Wayne Fusion Head Office

The Wayne Fusion Head Office is the your one-stop web portal for accessing centralised data from across your network. Working in seamless connectivity with the Fusion Automation Server to provide you with all of the information you need to effectively and efficiently manage your forecourts centrally from wherever you are. Through the Fusion Head Office system, users can easily:

- Track sales
- Implement price changes
- Monitor fuel stock
- Produce reconciliation reports
- Transmit data to wetstock management companies
- Interact with Enterprise Resource Planning
- Check Fusion device status

Intelligent features to make your life easier

- 1 Central storage for Fusion transactions
- 2 Ability to assign roles and permissions
- 3 Web-based customer access
- 4 Multilanguage options
- 5 Reporting suite
- 6 Price change administration

REPORTING SUITE

The Fusion Head Office has the ability to filter reports from PC, Android, iOS and Windows devices in a range of common file formats, including .xls, .csv, .pdf, .rtf and .tiff. Reports include:

- [Top 5 fuel sales](#)
- [Sales by site](#)
- [Tank reconciliation](#)
- [Transactions](#)
- [Tank information](#)
- [Deliveries and reconciliation](#)

PRICE CHANGE ADMINISTRATION

Making changes to your network pricing couldn't be easier. Using the Fusion Head Office, you can organise your price changes in a way that best suits your business.

- [Price changes by site group \(region, territorial managers or site type e.g. company-owned and company-operated or dealer\)](#)
- [Incremental \(% or fixed\) or fixed values](#)
- [Approval flow](#)
- [Price change status alert by mail or report](#)

INFORMATION MANAGEMENT

Information is organised on the system into user-friendly profiles, so that operators can easily view:

- 1 Standard transaction information
- 2 Fleet information
- 3 Attendant information
- 4 Payment information

ALERTS

Alerts can be generated by the Fusion Head Office using one of the following triggers:

- 1 Terminals
- 2 ATG/Sensors
- 3 Price poles

FRAUD PROTECTION

Using sophisticated reconciliation and alert reports, users can manage the entire network's behavior remotely and swiftly deal with issues as they occur.

SALES AND STOCK CONTROL

The Fusion Head Office gives you control over fuel movement within your network, using the following criteria:

- 1 Sales by site, grade, payment or hour
- 2 Tank stock by date or hour
- 3 Product stock by date or hour
- 4 Deliveries
- 5 Tank reconciliation

AUTOMATIC TANK GAUGE (ATG) INTERFACE

The Fusion Head Office interfaces with the Wayne Fusion ATG system to enable additional functionality as needs grow, new technology becomes available or regulatory requirements change – in most cases without installing additional platforms or technology infrastructure equipment.
